PROFESSIONAL SUMMARY

Artificial Intelligence Engineer & Data Engineering Lead with a strong academic background in Telecommunications and AI, and hands-on experience in designing AI-driven systems, data pipelines, and intelligent automation solutions.

Hold a BSc and MSc from Universidad Politécnica de Madrid, with research focused on neural networks and NLP-based information extraction, implementing a named entity recognition (NER) system.

Skilled in applying LLMs (OpenAI, Ollama, Hugging Face), developing scalable ETL workflows, and integrating diverse data systems (graph, SQL, NoSQL, vector stores) across innovative, data-intensive projects.

EDUCATION

Neo4j GraphAcademy Training Program*
Neo4j GraphAcademy (2025)

Master's Degree in Artificial Intelligence
Polytechnic University of Madrid (2022-2024)

Bachelor's Degree in Telecommunications Engineering
Polytechnic University of Madrid (2011 -2019)

LICENSES & CERTIFICATIONS

Neo4j Certified Professional
Neo4j | Issued: Jun 2025

Neo4j Graph Data Science Certification
Neo4j | Issued: Jun 2025

Aptis (B2 English Certificate)
British Council | Issued: Oct 2017

STACK SOFTWARE

Data		AI/ML		DevOps	
FWKs		Dev.		Infra.	
DBs		Agents		VC	
Backend		Models		MS Suite	

ACHIEVEMENTS

Bachelor's Thesis: "Machine learning for an articulated robotic arm in the training of handball goalkeepers "

Grade: 10 - Outstanding. Nominated for honors.

Fi Group International AI-Based Ideas Competition Winner: Internal competition across all Fi Group international offices to select the next AI-based project for development. The winning proposal included a detailed report covering the problem, proposed solution, required resources, and expected outcomes. As part of the prize, the project was implemented by a specialized company, with active participation from the winning team in its execution.

WORK EXPERIENCE

07/2025–Present
(Madrid, Spain)

BASE100

Technology consultancy specialized in the development of complex information systems and the modernization of legacy systems (IBM z / IBM i mainframes).

Promotes innovation through R&D, proprietary tools, and consulting services for migration, reengineering, and maintenance of critical systems.

BASE 100, S.A.

Senior AI & Data Engineer

As Senior AI & Data Engineer, I contribute to the design and development of AI-driven solutions focused on process automation and the enhancement of technical documentation in complex environments. My work combines the use of state-of-the-art language models with data processing tools to improve efficiency and the quality of generated information.

Key Responsibilities:

- Leveraging Generative AI (Ollama suite, DeepSeek, Qwen and open-source models -Hugging Face-) for technical documentation and automated information enrichment in software systems.
- Design and development of a system for analyzing and generating Javadoc documentation in Java programs using parsers and AI models.
- Creation of frameworks for processing and standardizing legacy code (COBOL, JCL, PL/I) to facilitate analysis, traceability, and future modernization (migration to Java).
- Integration of validation and automated cleaning methodologies (parsing, regex, AST, etc.) to ensure consistency and usefulness of the processed information.

Technologies

Data	Backend	IA	DevOps
COBOL, JCL, PL/I	Python	Ollama	GitLab
Java	FastAPI	DeepSeek	AWS
Tree-sitter		Qwen	Docker
		Hugging Face	

WORK EXPERIENCE

06/2024-07/2025
(Madrid, Spain)

KYRA GROUP - AKAIO

Artificial Intelligence Engineer & Data Engineering Lead (nov. 2024 - jul. 2025)

As Artificial Intelligence Engineer & Data Engineering Lead, I am responsible for designing and implementing advanced AI solutions for data extraction, enrichment, and intelligent automation. I also lead the architecture and supervision of end-to-end ETL pipelines and data-driven reporting systems to ensure efficiency, consistency, and scalability in data operations.

Key Responsibilities:

- Leveraging Generative AI with advanced LLMs (OpenAI suite, Ollama collection and open-source models -Hugging Face-) for data enrichment, extraction, and automation.
- Design, development, automation, and continuous optimization of end-to-end ETL workflows for large-scale data integration, cleansing, and structuring.
- Management of heterogeneous database systems (MongoDB, Neo4j, Milvus) for scalable access to structured and unstructured data.
- Implementation of RAG-based architectures and multi-agent systems (CrewAI, LangChain, n8n) for automated data enrichment, extraction, and analysis.
- Development of trend identification systems by combining information extraction from scientific APIs (arXiv, PubMed, OpenAlex) and web sources using intelligent processing tools.
- Dataset scouting and curation via Hugging Face, including structured cleaning and enrichment to enhance proprietary data assets.
- Preparation of analytical reports and KPIs to monitor data quality, integrity, and operational performance.

Artificial Intelligence Engineer (jun. 2024 - nov. 2024)

As an Artificial Intelligence Engineer, I contributed to the design and implementation of AI-powered systems focused on data enrichment through content generation, information extraction, and automated data processing.

Key Responsibilities:

- Leveraging Generative AI with advanced LLMs (OpenAI suite, Ollama collection, and open-source models -Hugging Face-) for data enrichment and transformation.
- Development and deployment of NLP techniques, including Named Entity Recognition (NER), for targeted information extraction.
- Management of non-relational and graph databases (MongoDB, Neo4j) for optimized data storage and retrieval.
- Preparation of analytical reports and definition of KPIs to monitor data quality and system performance.

Technologies

Data	Backend	IA	DevOps
MongoDB	Python	LangChain	Docker
Milvus	FastAPI	CrewAI / n8n	AWS
Neo4j		TensorFlow	GitHub
Numpy		PyTorch	
Pandas		Scikit-learn	
Matplotlib		Ollama / OpenAI	
MS Excel		Hugging Face	

AKAIO is a groundbreaking online platform that applies AI to revolutionize how entities drive innovation.

It empowers faster, bolder, and cost-efficient initiatives through the use of cutting-edge AI-driven methodologies.

WORK EXPERIENCE

10/2019–05/2024
(Madrid, Spain)

FI Group is an international consultancy firm with over 20 years of experience, specialized in securing public funding and tax incentives to support companies R&D and innovation initiatives across various industries.

FI GROUP (F. INICIATIVAS)

Consultant – R&D&I Project Funding and Management

Advised clients across diverse sectors on identifying and securing funding for R&D&I projects, while efficiently managing the related administrative, financial, and technical processes. Enhanced project workflows by implementing automation and custom data management scripts. Clients included El Corte Inglés, Inetum, CGI, Bosch, Banco Caminos, and Willis Towers Watson, among others.

Associated tasks:

- Comprehensive management of R&D&I tax incentives of:
 - Tax Deductions for R&D&I.
 - Research personnel bonuses.
 - Spanish public grants (PERTE VEC, PERTE Agro, *Programa de Apoyo al Transporte Sostenible y Digital*, among others).
- Portfolio client management.
- Automation and data enrichment through the development of custom scripts.
- Analysis and design of AI-based digitalization solutions within internal company groups.

Technologies

Data	Backend	Productivity
MS Excel	Python	MS Word
	Visual Basic	MS Power Point

10/2017–05/2019
(Madrid, Spain)

BT Group plc (formerly British Telecom) is a leading British multinational telecom company headquartered in London. It provides fixed-line, broadband, mobile, and TV services in the UK and operates in approximately 180 countries.

BRITISH TELECOM ESPAÑA

Operations Internship (Customer, Solutions, Engineering & Delivery department)

Contributed to the end-to-end management and automation of BT's Telco service disconnection processes, encompassing both the initial blocking phase for line/connection validation and the final deregistration phase for resource release. Focused on streamlining and optimizing workflows through the implementation of custom automation scripts.

Associated tasks:

- Comprehensive management of BT's Telco service disconnections.
- Automated blocking and deregistration processes with custom scripts to improve efficiency.
- Incident management.
- KPI's development and monitoring.

Technologies

Data	Backend	Productivity
MS Excel	Java	MS Word
	Visual Basic	MS Power Point

<< ... So we cannot know if we will be infinitely helped by AI, or ignored by it and side-lined, or conceivably destroyed by it. >> Stephen Hawking

**Thank you for your time,
Shall we talk?**
